DOCUMENT-IDENTIFIER: US 6574399 B2

TITLE: Ceramic waferboard for integration of optical/optoelectronic/electronic components

Brief Summary Text (12):

One aspect of the present invention involves forming a silicon waferboard having mechanical passive alignment features. A mold is then made from the silicon waferboard via electron forming. Green (unsintered) ceramic tape is formed in the mold and then sintered to form a ceramic waferboard having substantially the same mechanical passive alignment features as the silicon waferboard utilized to make the mold.
